Small Blocks

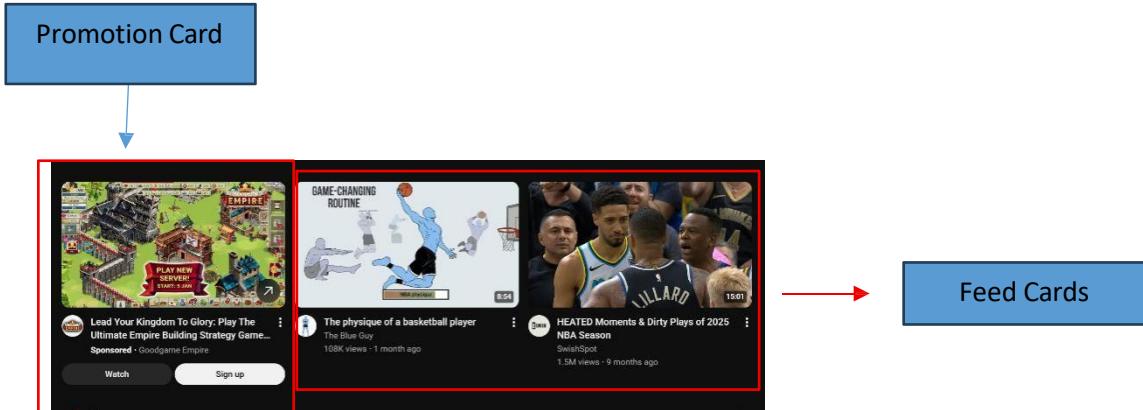

1. Sidebar

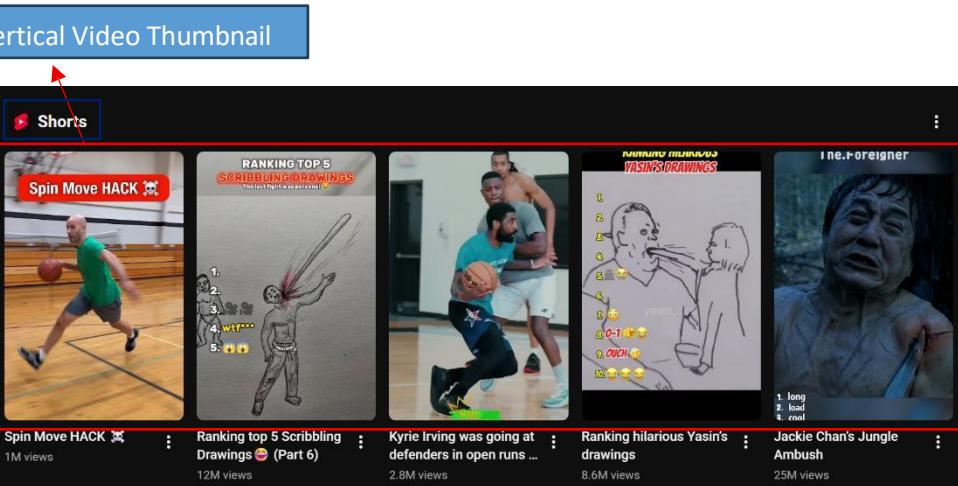

2. Navigation Bar

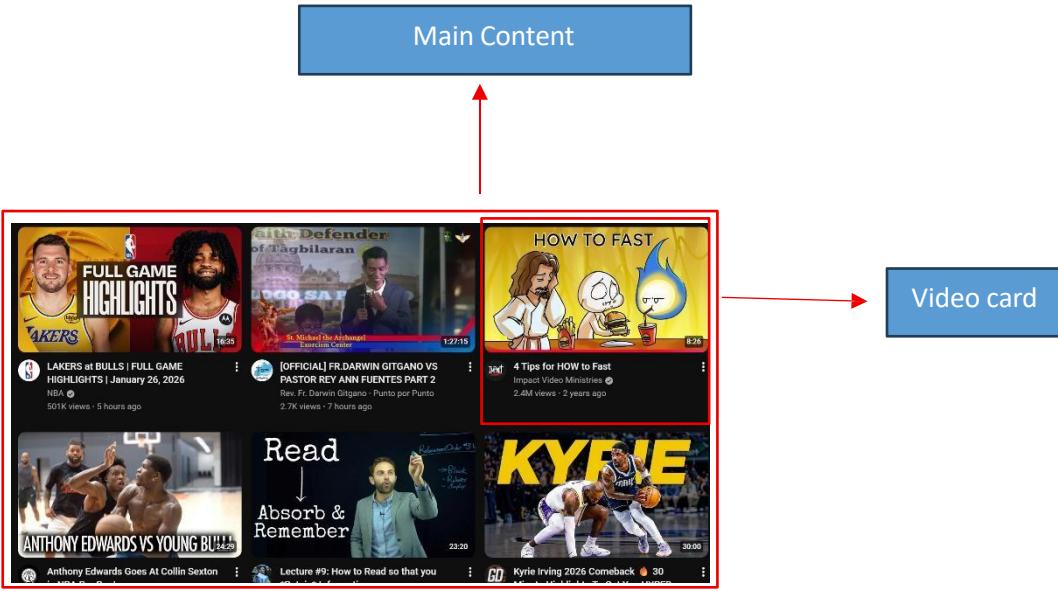

3. Featured Section

4. Shorts Section

5. Video Feed

Explanation

When analyzing YouTube's homepage, I first identified the large blocks or major sections: the header, sidebar, main video grid, and footer. Breaking the page into these sections helped me understand the general structure without getting lost in too many details.

Next, I examined each major section and listed the smaller elements it contains. For instance, the header has the logo, search bar, and profile icon, while the main video grid consists of video thumbnails, titles, channel names, and view counts. This breakdown helped me visualize how the page is organized and how I could approach coding it using HTML and CSS.

Finally, I sketched the layout on paper, labeling each section and sub-section. This sketch serves as a blueprint for implementing the webpage design efficiently and can be used for future projects to save time and plan layouts more effectively.
